INTERNATIONAL WORKING MEETING  
ON  
ENVIRONMENTAL EDUCATION IN THE SCHOOL CURRICULUM

FINAL REPORT

INTERNATIONAL UNION FOR CONSERVATION OF NATURE  
AND NATURAL RESOURCES

1400  
18p  
1970  
007

INTRODUCTION

by  
Dr. Samuel F. Dennis  
Under Secretary for Instruction  
Department of Education, Monrovia  
Liberia

United Nations objectives for designating the year 1970 the beginning of the "Second Development Decade," as International Education Year, are essentially for the purpose of evaluating past achievements; analyzing present educational problems and intensifying national efforts in the expansion and improvement of educational programs and systems. Four important suggestions were made by UNESCO as being worthy of study and implementation during this Second Development Decade. Among them is that of making educational systems realistically responsive to individual needs and aspirations, and relevant to the societies in which people live.

In cooperation with the United Nations Educational Scientific and Cultural Organization (UNESCO), the International Union for Conservation of Nature and Natural Resources (IUCN),

organized a Working Committee to conduct a Seminar on ecology and environmental instructions, to be conducted at Foresta

Institute, Carson City, Nevada, U.S.A. This was a challenge.

The task of bringing man to the realization of the fact that he is becoming the victim of his own inventions is one of the most challenging ones of our times. This is not easily presented

neither is it readily accepted. As urgent as the need is so is

it a threat to the false securities man has found in the techno-  
sphere.

The Working Meeting began its work at Foresta Institute on

June 20 with representatives from fourteen countries and four

continents. Under the leadership of Foresta's President,

Dr. R.G. Miller and Dr. J. Gerovsky of IUCN, for twenty days,

lectures were given by professional scientists and environmental  
specialists; seminars conducted; discussions held and field work

designed and supervised with the full participation of delegates. These were intended to emphasize that the survival of this beautiful world is threatened by man's technological invasion into the biosphere; and depends upon his changed and sustained right attitude and activities in a nature conservation program. The effective creation of this awareness and a strong emphasis on environmental education as an interdisciplinary and multidisciplinary science is evidenced by this Report and its principal thesis.

Foresta Institute could be referred to as the biggest little Institute in the world. Small in area and structure, it is unlimited in its global outreach and impact in relating environmental education to national and international needs and in bringing man in harmony with his total environment.

At Foresta Institute representatives of many nations have been exposed to the realization of the need to check the imbalance which now exists between biosphere and technosphere. The pressing and urgent need for nature conservation, preservation management and utilization was underscored.

This Report contains valid recommendations to IUCN and UNESCO and humble suggestions to member States which we hope would appeal to them for eventual implementation.

Finally this Report summarizes twenty days of intensive training and rigid activities at Foresta and indicates the method of operation and the results achieved in the efforts to fulfill the assignment of IUCN and UNESCO.

The core of the working day was the presentation of a position paper by a participant or guest lecturer. The content might include one of the following: present environmental problems, continuous system of environmental education; implementation of environmental principles in school curricula; environmental-

ON ENVIRONMENTAL EDUCATION IN THE SCHOOL CURRICULUM

THE INTERNATIONAL WORKING MEETING

Proceedings of the meeting, its conclusions and resolutions will be published shortly.

Midway in the third and final week the conference began to assess its work; draw conclusions. Resolution writing began. New ideas, problems and significant approaches to an environmental curricula developed during the first two weeks--and the early part of the third week, provided the framework for the resolution writing.

On a field excursion the participating delegates were able to observe nearby areas with critical environmental problems or visit places where environmental science course work was in progress. Field excursions were made to Pyramid Lake, Lake Tahoe, Washoe Dunes, a Sierran Mountain Meadow, developing Sierra Ski areas, the Desert Research Institute, the University of Nevada and Incline High School.

The delegates were able to observe and actually participate with the untrained students under various field conditions, thus providing a truly relevant education experience.

U.S.  
A student demonstration group illustrated the use of field and laboratory techniques in ecological studies. The demonstration group composed a sample of students of varying backgrounds and of varying grade levels from diverse geographical areas of the U.S.  
Excursion or most usually in a Field Study Methodology Session. Field Study Methodology was an unusual aspect of the session. A student demonstration group illustrated the use of field and laboratory techniques in ecological studies. The remainder of the day (usually 1/2) was spent on a field excursion or most usually in a Field Study Methodology Session. Field Study Methodology was an unusual aspect of the session. A student demonstration group illustrated the use of field and laboratory techniques in ecological studies. The demonstration group composed a sample of students of varying backgrounds and of varying grade levels from diverse geographical areas of the U.S.  
For the individual nations represented. Immediately following each paper a lengthy discussion ensued. The discussion period was quite important as it allowed a free exchange of ideas, especially in problem areas familiar to delegates.

conservation education in the school curriculum in various countries; preparation of textbooks and teaching aids suitable

Methodology of Field Studies (usually a.m.)

Working Day 1 -- Deployment to Desert Sand Dune Environmental Study Area, Field Observation of Demonstration Student Group.

Working Day 2 -- Deployment to Slide Mountain study area - Field lecture: "Local environmental conditions" (J.V.A. Conkey, Foresta Institute). Observation of demonstration student group oral examination (reporting on a previous 4-day desert environmental study).

Debriefing on Field Observations.

Participation of delegates with students in reducing data from the morning field work.

Working Day 4 -- Observation of student classroom instructional techniques.

Deploy to field study area to see application of lecture material.

Debriefing on field observations.

Working Day 5 -- Excursion to Desert Research Institute and University of Nevada.

Working Day 6 -- "Teacher training in environmental science" (J.V.A. Conkey, Foresta Institute).

Deploy to field microclimate technique observation.

Working Day 7 -- Demonstration students oral examination on Lever's Canyon environmental study areas.

Working Day 8 -- Observation of student classroom lecture -- "Ecological evolution of streams and ponds" (J.V.A. Conkey, Foresta Institute).

Working Day 1 -- Keynote Address (R.G. Miller, Foresta Institute).

Environmental Education in School Curriculum

Working Sessions

Working Day 18 -- Conclusion and Resolution Drafting Committees.

Working Day 9 -- Observation of student activities -- Washoe

Debriefing on field observations.

Deploy to mountain meadow ecological study area.

Keynote Address IUCN (Jan Czerovsky, IUCN).  
Working Day 2 -- Devoted to field observation and later discussion.  
Working Day 3 -- Lecture: "The System of Environmental Education" (Jan Czerovsky, IUCN).  
Delegate Lecture: "Environmental Education in the Curricula of Indian Schools" (S. Doraiswami, India).  
Discussion Session (Chairman, R.G. Miller, U.S.A.).  
Lecture: "Educational T.V. (L. Smith, Station KOED Bay Area Educational Television Association, San Francisco).  
Working Day 4 -- Delegate Lecture: "Biological education in relation to manpower requirements in Western State of Nigeria" (V. Ninan, Nigeria).  
Discussion Session (Chairman, E.S. Mophapi, Lesotho).  
Lecture: "Citizen action -- human resources" (Maya Miller, U.S.A.).  
Lecture: "International legal aspects of environmental conservation" (Homer G. Angelo, U.S.A.).  
Working Day 5 -- Lecture: "Field stations in research and as an educative agency" (M. Dale Arvey, U.S.A.).  
Delegate Lecture: "Environmental education in the primary schools -- the Netherlands" (Harry Wals, The Netherlands).  
Discussion Session (Chairman, Mathew Baibas, Greece).  
Lecture: "Permanent study areas and their protection in different parts of the world" (Maria Buchinger, Argentina).

Working Day 10 -- Lecture: "Why Care? Endangered Species in the Classroom" (T. Nappe, U.S.A.)

Guest Lecture: "Environmental education school programs in the State of California" (R. Schaffer, U.S.A.)

Delegate Lecture: "The introduction of conservation and ecological education in Lesotho" (E.S. Mohapi, Lesotho)

Working Day 9 -- Working Group II: "School facilities and staff environmental education" (Chairman, S. Dennis, Liberia, reporters, H. Wals, Netherlands and V. Ninan, Nigeria)

Round Table: "Extracurricular activities as complementary to formal education", with National Wildlife Federation Representatives joining (W. Reavely, J. Ruch)

Delegate Lecture: "Environmental education and the NEED Program" (William Taylor, National Park Service, U.S.A.)

Working Day 8 -- Working Group I: "Concepts of environmental education" (Chairman, P.C. Bandyopadhyay, reporter, M. Buchinger)

Working Day 7 -- Observation of oral reports.

Lecture: "Swedish Schools and European Conservation Year, 1970" (Johann Flodstrom, Sweden)

Delegate Lecture: "1970 Natural Resources and Conservation Education Seminar in Lusaka, Zambia" (J. Mubanga, Zambia)

Discussion Session (Chairman, J. Cerovsky)

Working Day 6 -- Keynote Address UNESCO (P.C. Bandyopadhyay, UNESCO)

Delegate Lecture: "Various environmental programs in the Netherlands" (Harry Wals, The Netherlands)

Day devoted to Pyramid Lake Excursion.

Lecture: The work of the Biology Teaching Commission of IUBC" (D.M. Reynolds, U.S.A.)

Working Day 11 -- Working Group III: "School outdoor and community facilities for environmental education" (Chairman, W. Taylor, reporter, E.S. Mohapi).

Delegate Lecture: "Textbooks and teaching aids in environmental education" (R. Saveland, U.S.A.).

Working Day 12 -- Working Group IV: "Starting and improving environmental education curricula" (Chairman, S. Doraiswami, reporters, M. Baibas and H. Wals).

Delegate Lecture: "Increased emphasis on environmental education in Liberia" (The Hon. Dr. Samuel F. Dennis, Liberia).

Lecture: "The Nature Conservancy and long term teaching areas" (H. Johnson, The Nature Conservancy, U.S.A.).

Working Day 13 -- Working Group V: "Summarization of Working Sessions".

I-VI (Chairman, J. Mubanga, reporter, J. Conkey).

Delegate Lecture: "Environmental education in Pakistani schools curricula" (Dr. T.A. Lohi, West Pakistan).

Working Day 14 -- Resolution and Drafting Committees.

Working Session IV (continued).

Working Day 15 -- Delegate Lecture: "Aspects of the Greek educational system with special reference to environmental education" (M. Baibas, Greece).

Delegate Lecture: "Environmental education in Venezuela"

(R.G. Gondelles, Venezuela)

Lecture: "The arts and environmental education"

(N. Raven, U.S.A.)

Resolution and Drafting Committees.

Working Day 16 -- Resolution and Drafting Committees (continued).

Delegate Lecture: "Introduction of environmental

education in the curricula of Sudan schools"

(A. Zakaria, Sudan).

Delegate Lecture: "Implementation of environmental

education in Senegal" (S.L. Gueye, Senegal).

Working Day 17 -- Preparation and finishing of reports and

resolutions.

Lecture: "The youth out-of-school activities and

education in environmental studies and conservation"

(J. Cerovsky, IUCN).

Working Day 18 -- Closing Session: Adopting of resolutions.

Lecture: "Youth environmental action in the U.S.A."

(Miss Karen Jensen, U.S.A.)

Lecture: "International bibliographic aids for ecology

instruction and library development" (J.B. Regnell, U.S.A.).

The future of environmental education planning and

follow-up. Discussion with Members of IUCN Commission

on Education (J. Cerovsky, IUCN).

REPORT OF THE WORKING GROUP I  
CONCEPTS AND ELEMENTS OF ENVIRONMENTAL EDUCATION

Chairman: Mr. P.C. Bandyopadhyay  
Reporter: Dr. M. Buchinger

After discussing a variety of possible definitions, the delegates agreed to accept the following:

Environmental education is the process of recognizing values and clarifying concepts in order to develop skills and attitudes necessary to understand and appreciate the interrelatedness among man, his culture and his biophysical surroundings. Environmental education also entails practice in decision-making and self-formulating of a code of behavior about issues concerning environmental quality.

Some of the delegates felt that the words "interpreting" or "transmitting" of concepts and knowledge should have been included into the definition to stress the different phases of the educational process.

Delegates whose native tongue is not English expressed their concern about possible misunderstandings when translating expressions like "skills" and "self-formulation."

Based on the Concepts and Recommendations of the Education Commission of the UNESCO Conference on Biosphere which were used as a general outline, the delegates aimed to further develop and establish some concrete guidelines.

First of all, the group discussed which of the elements should be included in the curriculum. It was agreed that environmental education is a science-centered multidisciplinary subject where most-if not all school subjects--could and should be incorporated. Wherever possible it might also be taught at different levels as a subject or as units. In teacher-training courses the broad concept of environmental education should form an essential element of this program.

A lengthy discussion followed about the so-called "key subjects" in which the elements of environmental education could be incorporated. The reason for the differences of opinion expressed by the delegates could be traced to the fact that the school curricula in different countries have a variety of subject-matters, and sometimes even under the same name, e.g. "Natural Sciences," there are different matter content. It was decided that a special drafting committee will elaborate on this problem. Tentatively, it was agreed that wherever it is taught, the following subject matter areas should be used: ecology, conservation, geography, geology, pedology, hydrology, agriculture, botany, zoology, physics, chemistry, climatology, etc. It was suggested that certain elements of mathematical reasoning (logic) would prove useful in the process of decision-making.

Such aspects as space, instruments, equipment and fixtures are to be based on the individual countries financial resources and

1. Aims and objectives.
2. Present existing problems in many countries and the causative factors.
3. Solution to those problems.

Under the planning three aspects of the topic were discussed:

Chairman: Dr. S.F. Dennis  
Reporters: Mr. V. Ninan  
Mr. H. Wals

REPORT OF THE WORKING GROUP II  
SCHOOL FACILITIES, STAFF, SPACE, FIXTURES,  
INSTRUMENTS AND EQUIPMENT

It was suggested that surveys should be made to find out if teaching material on environmental education is available or if new material has to be produced. There should be also a definite differentiation between the teaching material for the use of teachers and that for the use of students.

The role of Social Sciences, History, Economics, Civic Education as important factors was unanimously recognized.

Delegates felt that Mathematics and literary subjects and creative arts should be used not only as auxiliary but as component disciplines of environmental education.

In addition, creative arts like drawing, painting and sculpture would develop the power of observation and presentation. For the purpose of encouraging better and correct exposition, language and literature courses have a contribution to make to the general understanding of the subject-matter of environmental education.

A continuous program on ecological research was considered necessary. Such programs should be associated with documentation programs on environmental education. The possibility of specialists helping the various centers on an international, inter-regional and national basis was considered.

It would be better that a ratio of classroom has not more than 30 students to a teacher in view of the fact that more personal attention and contact from a teacher is required for experimentation and field work.

environmental problems even though it may be useful to draw out a basic minimum requirement for an effective handling of environmental education. This may also be helpful when new schools are started.

Both categories may include natural areas or areas re-  
covering from adverse use (e.g. fields, abandoned  
lots and properties, junk yards, dumps and garbage  
pits, farms and farmlands, banks of rivers and streams,  
graveyards, historic sites and battlefields, factory  
sites), and public parks with or without community  
facilities, e.g. centers of information, etc.

on conservation and use, the secondary stage in developing an environmental ethic--the purposeful courses of action and involvement. These levels of development will dictate the application and choice of sites, off-school opportunities for study.

And international directory of representative environmental education programs should be the ongoing objective of this segment of the proposed IUCN committee. The directory should include an abstract of each program, simple exercises, and an address or source where additional information may be obtained. For example-- Children's Gardens of the Netherlands; NEED/ESA program, National Park Service, USA; programs of special studies-- Foresta Institute, etc.

In addition, the directory should compile all testing materials used to evaluate such programs. The purpose of this directory will be to promote exchange of all environmental materials which may be implemented in or complementary to programs of other nations.

STARTING AND IMPROVING ENVIRONMENTAL CURRICULA

REPORT OF THE WORKING GROUP IV

The horizontal component of the chart is the three curricular stages indicated previously. The vertical component consists

ways.

In order to give an indication of the content and objectives of an environmentally-oriented curriculum, a chart was prepared. It was agreed that while serving somewhat as a model for an interdisciplinary, developmental program in environmental education, the chart could be adapted to different national and local situations in a variety of

D. Content

Increasing perception of changes through time with particular reference to in-depth studies of environmental and social problems; in short, developing an environmental ethic.

Stage III --

Emerging patterns and interrelationships of environmental features on local, national and world scales, concentrating on conservation and use. During this stage, particular attention is to be given to case studies illustrating representative man-environment problems.

Stage II --

Building basic vocabularies and skills leading to an appreciation and awareness of the varieties and similarities in the environment.

Stage I --

Recognizing the developmental process in learning, a major focus was selected for each stage reflecting the overall objectives of the program at the three levels as follows:

C. Major Focus of Each Stage

achieve a multi-disciplinary approach.

of the various major factors of the natural and cultural environment, rather than traditional subject headings.

The statements given under the headings at each level not only give an indication of content to be interwoven into instruction, but also suggests specific aims and objectives in furthering environmental education throughout the curriculum. The statements constitute performance objectives to be attained by students who have completed a stage in environmental education.

The chart as currently formulated reflects the limitations of time available at this international working meeting. It is recommended that further development and refinement of this work be an ongoing activity resulting from this meeting.

	<u>AREA &amp; LOCATION</u>	<u>ATMOSPHERE &amp; COSMOS</u>	<u>LANDFORMS, SOILS &amp; MINERALS</u>
STAGE I	Experiences basic orientation within the local and National environments. Perceives the earth as the home of man. Observes how man uses and influences the environment.	Can describe and measure climatic factors in the local environment. Recognizes the role of the atmosphere in the life of plants and animals. (special storms, evaporation and precipitation and fire).	Knows that soil is dynamic: (a) it forms (b) it contains living things and supports plant growth (c) it erodes Can identify different kinds of landforms. Sees the interaction between landforms and living things.
STAGE II	Perceives the earth of great magnitude but shrinking in terms of time, distance, and limits of resources. <b>Knows</b> the continuous interaction of man and biosphere.	Can identify and explain the major climate patterns of the world and relate these to vegetative patterns of the earth and economic activities of man. Observes the man-induced climate variations in a local area, noting air pollution and its effects.	Can point out on a map the general arrangement of landforms in his country and the world. Can identify various mineral and energy resources and demonstrate the uneven distribution.
STAGE III	Supports planning and research on wise land use and landscape management while opposing indiscriminate encroachment on open space.	Analyses and contributes to decisions affecting the quality of the atmosphere	Knows how man accelerates processes of degradation and takes steps to ameliorate these conditions: (strip mining, earth moving and sedimentation).

	<u>PLANTS &amp; ANIMALS (BIOTA)</u>	<u>WATER</u>	<u>PEOPLE</u>
STAGE I	Knows from firsthand experiences various kinds of plants and animals in their own environment. Recognizes interdependence among soil, atmosphere, plants (producers) animals and man (consumers)	Knows the necessity of water for life and its importance as a natural resource.	Recognizes the varieties and similarities among people. Knows how people live in and use different environments. Learns the interrelationships between beliefs and rituals and environment.
STAGE II	Can identify and explain a biological community in relation with its environment. Has a notion of the food chain and ecological balance. Recognizes the main types of biological communities and the impact of man on them. Is aware of endangered species, their importance and measures for their conservation.	Knows the water cycle and the various stages in the evolution of streams. Is familiar with the distribution of water on the earth and the general circulation pattern of ocean currents. Has an idea of the influences of water in the distribution of biological communities and how the distribution can be disturbed by pollution.	Sees population movements and settlement patterns as means by which cultural groups choose their environments. Discovers how people have used the same land in different ways at different times.
STAGE III	Acts to create and preserve conditions under which ecologically balanced ecosystems can evolve.	Analyses and contributes to the decisions affecting the availability and quality of water.	Uses data to interpret trends in population growth and distribution in relation to quality of life.

	<u>SOCIAL ORGANIZATION</u>	<u>ECONOMICS</u>	<u>AESTHETICS, ETHICS, LANGUAGE</u>
STAGE I	Recognizes ways in which people organize themselves. Learns individual and group responsibility concerning environment.	Relates food, clothing and shelter needs to available resources. Finds that specialization of labor increases efficiency.	Builds a basic vocabulary of environmental terms. Names and classifies plants, animals, water features, soils, minerals. Acquires basic skills in using visual arts and music to express feeling for the environment in an elementary way.
STAGE II	Observes the relationships between political and natural boundaries. Sees the state as an agency for working on environmental problems. Recognizes international cooperation as a means of solving environmental problems.	Observes patterns in organizing resources with an emphasis on their rational use. (Agriculture and grazing, forestry and fishing, mining and manufacturing, transportation and communication)	Uses visual art, music and dance drama, language and photography to describe and interpret various environments. Appreciates how great artists and writers have perceived their environments.
STAGE III	Acts to alleviate environmental problems through laws, public policy, and action programs	Works toward domestic and international solutions of environmental problems related to nutrition, poverty, transportation, waste disposal, source and distribution of energy resources.	Has personal attitudes and habits reflecting a caretaker responsibility toward environment and communicates this feeling to others. Visual pollution.

RESOLUTION

WHEREAS, UNESCO endorsed a Seminar in Ecology and Environmental sciences as one of the outstanding activities to be conducted during INTERNATIONAL EDUCATION YEAR; and

WHEREAS, the Working Meeting organized by the International Union for Conservation of Nature and Natural Resources (IUCN) in co-operation with UNESCO (United Nations Educational Scientific and Cultural Organization) did convene at Foresta Institute from June 20, to July 10, 1970;

RESOLVED, that the participants

1. EVALUATE: this Working Session as being a very productive, resourceful, informative and rewarding experience in promoting environmental studies in the school curricula; 2. DETERMINE to exert every effort in conveying to their Governments and educational authorities the most recent concepts of environmental education and to promote the implementation of those objectives.

3. DECIDE to suggest and encourage regional and international cooperation in the teaching of environmental education and nature conservation.

4. REQUEST IUCN and UNESCO's acceptance of the listed draft recommendations of the Report of the Working Committee, and respectfully crave the attention of their Governments to the suggestions contained in the Committee's final report;

5. REMAIN available as consultants and promise full cooperation in the execution of the suggested "plan of action" or its revision or redraft.

6. RECORD their unbounded appreciation to UNESCO, IUCN, Foresta Institute and their respective Governments for the opportunity to have been involved in an intensive Working Program on the ecological and environmental sciences and their place in the primary and secondary schools curricula.

7. MAKE honorable mention of an express special gratitude to Foresta Institute's President, staff and workers for the use

The following resolutions were adopted by the Working Group on the  
 subject of the Forests of the World, during its meeting in Rome,  
 from 14 to 18 October 1978. The text of these resolutions is  
 given in the appendix to this report. The Working Group also  
 adopted the following recommendations:

RESOLVED ALSO, that a copy of these resolutions be filed in the  
 archives of Foresta Institute.

RESOLVED FURTHER that these resolutions be forwarded to IUCN,  
 UNESCO and member states either as a preambular part of the  
 Final Report of this Working Committee, or as an important  
 appendix thereof.

Recommendations

The Working Meeting, considering that an urgent need exists for teacher training and guidance in environmental education, Recognizing the importance of exchange of experiences and views on an international level, Recommends to UNESCO and IUCN, particularly its Commission on Education through their joint efforts;

Rec. No. 4

- 1) the organization of regional working meetings on environmental education in the school curriculum in various regions of the world using the experience gained and materials provided by this first introductory Working Meeting as well as the advice and assistance of experts attending this Working Meeting;
- 2) the organization of a second International Working Meeting in two to three years to evaluate the results achieved in the meantime and to develop further the efforts started;
- 3) the stimulation of national environmental curricular developments and related activities, such as conferences, workshops or seminars, summer programs, courses, by suggestions to the governments and through the IUCN member organizations.

Rec. No. 3

The Working Meeting, Recognizing with satisfaction the attention ascribed to environmental conservation teaching among the basic objectives of the IUCN Commission on Education and relevant projects listed in this commission's program of work, Expressing its full support to these objectives and program, Recommends to IUCN, namely its Commission on Education:

stimulation and development of environmental education on national, regional and international level be supported and organized; and relevant materials, information, advice and expert assistance be provided.

- 1) that through a reform of the total curriculum, the environmental education be introduced as an obligatory and integrated component of the school educational system at all levels;
- 2) that appropriate pre- and in-service teachers training be organized through obligatory environmental conservation courses in teacher training colleges, universities and other educational establishments involved in teachers training and through extension programs for students and teachers, such as seminars, workshops and summer camps;
- 3) that national surveys of the existing textbooks and other materials and teaching aids actually or potentially used in environmental education be undertaken and, if necessary, assistance by relevant international agencies and international organizations be asked in accomplishing this task;

Suggestions  
Sugg. No. 1

The Working Meeting,  
Considering the appropriate education being a necessary prerequisite for improvement of the total critical environmental situation,  
Being aware of the urgent need for environmental teaching and adequate training of teaching personnel,  
Suggests to the Governments and their responsible educational authorities as well as to the national educational organizations:

- 1) the preparation and publishing of a general methods handbook on environmental conservation teaching;
- 2) the organization of international short-term training courses for teachers, school biologists and other educators involved with or related with environmental teaching, possibly jointly with some universities and teachers training colleges ready to cooperate;
- 3) the posting of experts to assist the training of teachers in environmental sciences and education in developing countries.

environmental education on an international level,

Action Program for follow up Work

PLAN OF ACTION

The Working Meeting supports the project within the program of the IUCN Commission on Education to prepare and publish a general method handbook on environmental conservation teaching. The conclusions of the Working Session III and the Working Session IV of the present

III. Methods Handbook on Environmental Conservation Teaching

- 1) Countries may be grouped in such a way that each participant could organize a common program for an area.
- 2) The program could include exchange of experience on matters of environmental problems and education.
- 3) Exchange of materials and visit.
- 4) Possibility of organizing area or regional meetings.
- 5) Such regional/area programs should be based on the outcomes from the present Working Meeting and should try to develop its conclusions and thoughts in proper depth adapted to the conditions and needs of the relevant region or area under a central coordination executed by IUCN Commission on Education.

Plan of action is suggested:

In view of the number of countries participating in this meeting it is desirable that each participant play a major role in disseminating the spirit of awareness for environmental education on a global level. The following proper coordination machinery for regional cooperation in the existing and developing IUCN Education Commission's regional structure.

II. Regional

- 2) setting up environmental education libraries,
- 3) assessing existing materials and initiating materials which develop some or all of the themes presented by this meeting.

Working Meeting are proposed as a basis for this manual. The participants of this Working Meeting declare themselves ready to cooperate with the working group of IUCN Commission on Education proposed to deal with this special project.

APPENDIX

LIST OF PARTICIPANTS

A. ORGANIZING COMMITTEE

Chairman: Prof. Dr. Richard Gordon Miller

Director  
Foresta Institute for Ocean and  
Mountain Studies  
Route 1, Box 620  
Carson City, Nevada 89701  
U.S.A.

Secretary-General:

Dr. Jan Cеровsky  
Education Executive Officer  
International Union for Conservation  
of Nature and Natural Resources  
1110 Morges  
Switzerland

Special Consultant:

Mr. P.C. Bandyopadhyay  
Specialist on Science Education Program  
within the School Curriculum  
Division of Curriculum and Research, E.D.S.  
UNESCO  
75 - Paris 7e  
France

Members:

Mr. James V.A. Conkey  
Deputy Director  
Foresta Institute for Ocean  
and Mountain Studies  
Route 1, Box 620  
Carson City, Nevada 89701  
U.S.A.

Dr. Maria Buchinger  
Director  
Foresta Institute Latin American  
Natural Area Programs  
National Parks Association Building  
1701 18th Street, N.W.  
Washington, D.C. 20008  
U.S.A.

Mrs. Terry Loy  
Acting Secretary  
Foresta Institute for Ocean  
and Mountain Studies  
Route 1, Box 620  
Carson City, Nevada 89701  
U.S.A.

Mrs. Yvonne Booth  
Foresta Institute for Ocean  
and Mountain Studies  
Route 1, Box 620  
Carson City, Nevada 89701  
U.S.A.

B. DELEGATES

Prof. M. Dale Arvey  
Chairman, Department of  
Biological Sciences  
University of the Pacific  
Stockton, California  
U.S.A.

Mr. Mathew Baibas  
Department of Programming and  
Studies of Secondary Education  
Ministry of Education
