

## **18. Teacher training**

**The 10th General Assembly of IUCN** meeting at New Delhi in November 1969

**appeals** to Governments that teacher-training for primary and secondary schools should include environmental education, of which the training in field-work ought to be a vital part, and that all fields of biology-teaching at universities and teacher-high schools should include practical training in organising field-work,

and **further appeals** to all relevant bodies to provide didactic material and financial aid wherever these are urgently required.
